

The high-definition standard ENG lens. HA18x7.6ERM/ERD

With the longest focal length, 137 mm (274 mm with 2X Extender), and the widest angle of view (64° 30') at 7.6 mm, the HA18x7.6 is the new HD standard lens for all high-definition broadcast news and field production applications in 16:9 image format.

The HA18x7.6 is, of course, equipped with internal focusing and designed using the exclusive Fujinon GO-Technology. GO-Technology enables us to optimize all optical features in the composition of the lens, resulting in a 20 – 30% improvement in all optical

features compared to conventional lenses. The latest glass materials with high refractive indexes and ultra-low dispersion are used to achieve these objectives.

Excellent ramping characteristics combined with minimal ghosting and flare, reduced pumping, minimized longitudinal and lateral chromatic aberrations and high MTF values provide for a standard lens which is the match for any professional challenge you may think of. As the new HA18x7.6 offers all the benefits of latest technologies in design

and manufacturing, production flexibility is almost unlimited.

The Fujinon HA18x7.6 – the new high-definition standard lens with a versatile performance and compact dimensions.
